# i Exam Information

- The exam is composed by 7 sections
- There are not optional sections, you should answer all sections
- Section 1 and 2 can be done on Scantron sheets
- Incorrect answer in the quiz are penalized, but the questions that you don't answer will not get penalized.
- You have 3 hours to solve the exam

**GOOD LUCK!** 

i

# Ontology mondelling information

- You can model the ontology in a separete sheet (Scantron)
- In order to get the full grading for this question you should use OWL and OWL2 vocabulary and OWL complex classes. There are other possible solutions which are correct but don't give the full grading.

# Ontology modelling

We need to model an ontology about persons with the following requirements: The Person class is composed by all men and women. A man cannot be at the same time a woman, and a woman cannot be at the same time a man. Any Person can have a child which must be another different person than itself and no two persons can be each others child.

 To get the full grading of this exercise, you should use the suitable OWL and OWL2 vocabularies when needed

You can use the following prefixes:

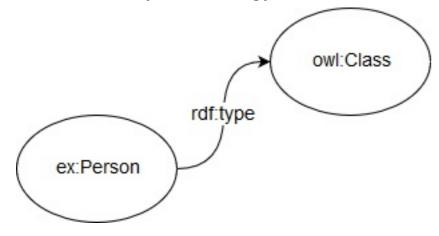

@prefix rdf: <a href="http://www.w3.org/1999/02/22-rdf-syntax-ns#">http://www.w3.org/1999/02/22-rdf-syntax-ns#</a>

@prefix rdfs: <a href="http://www.w3.org/2000/01/rdf-schema">http://www.w3.org/2000/01/rdf-schema#>

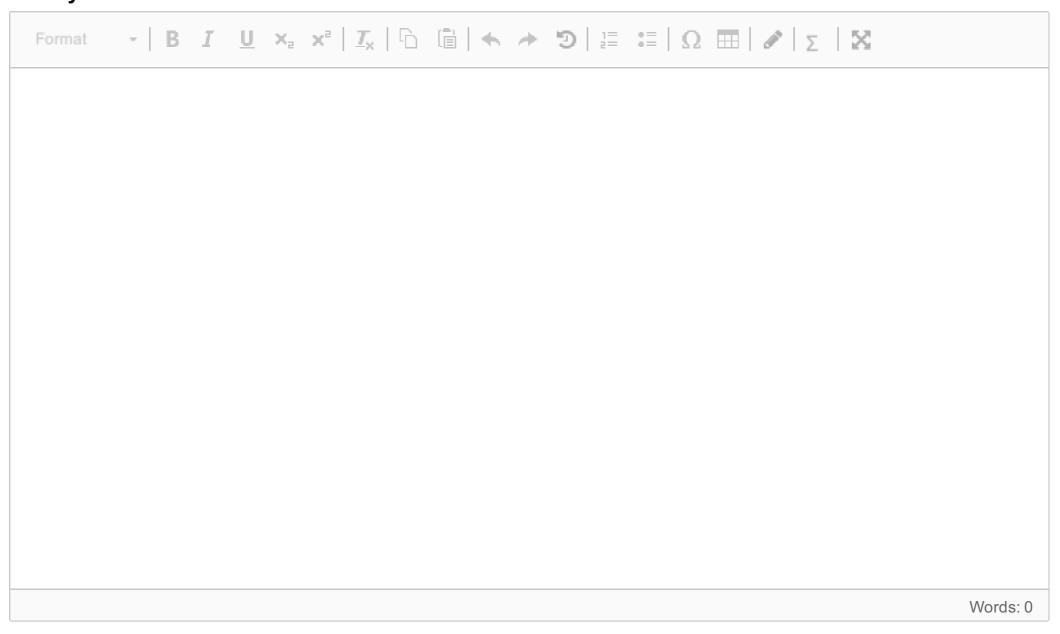

@prefix owl: <http://www.w3.org/2002/07/owl#>

@prefix ex: <a href="http://www.example.org/examINFO216#">http://www.example.org/examINFO216#</a> >

You can start your ontology with:

#### Fill in your answer here

# i RDF/XML information

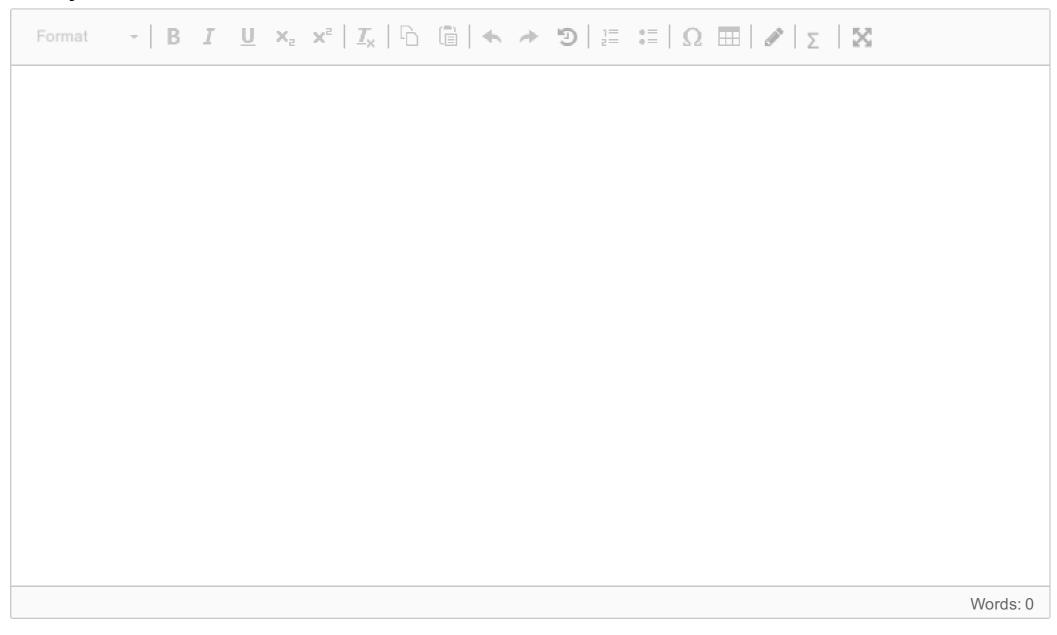

• You can draw the ontology in a separate sheet (Scantron)

# Draw the output graph of the following RDF/XML data model

Draw the output graph of the following RDF/XML data model:

```
<?xml version="1.0"?>
<rdf:RDF
   xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"
   xmlns:uib="http://www.example.org/foo/uib#">
   <rdf:Description rdf:about="http://www.example.org/foo/uib#Trude">
       <uib:workplace>
           <rdf:Description rdf:about="http://www.example.org/foo/uib#SVF">
               <uib:belongs to>
                   <rdf:Description rdf:about="http://www.example.org/foo/uib#UiB"/>
               </rdf:Description>
       </uib:workplace>
       <uib:workplace>
           <rdf:Description rdf:about="http://www.example.org/foo/uib#MCB">
               <uib:belongs to>
                   <rdf:Description rdf:about="http://www.example.org/foo/uib#UiB"/>
               </rdf:Description>
       </uib:workplace>
   </rdf:Description>
   <rdf:Description rdf:about="http://www.example.org/foo/uib#Marie">
       <uib:workplace>
           <rdf:Description rdf:about="http://www.example.org/foo/uib#SVF"/>
       </uib:workplace>
   </rdf:Description>
   <rdf:Description rdf:about="http://www.example.org/foo/uib#UiB">
       <uib:has faculty>
           <rdf:Description rdf:about="http://www.example.org/foo/uib#SVF"/>
       </uib:has faculty>
   </rdf:Description>
   <rdf:Description rdf:about="http://www.example.org/foo/uib#Marie">
       <uib:salary rdf:parseType="Resource">
           <uib:quantity rdf:datatype="http://www.w3.org/2001/XMLSchema#int">400000</uib:quantity>
           <uib:period>
               <rdf:Description rdf:about="http://www.example.org/foo/uib#Annualy"/>
           </uib:period>
       </uib:salary>
   </rdf:Description>
</rdf:RDF>
```

# i Information about the Quiz

- The Quiz is composed by 40 questions
- You don't need to answer all the questions
- ullet Each incorrect answer is penalized by  $-\left(questionValue*rac{1}{numberOfOptions-1}
  ight)$
- The questions you don't answer are not penalized
- There is only one correct answer
- Most of the questions have 3 options, exept some of them which have only 2 options
- There is a few group of questions where you have to choose the incorrect answer (it is stated in the question).

## Who is the inventor of the World Wide Web?

Who is the inventor of the World Wide Web?

Select one alternative:

- Steve Wozniak
- Timothy John Berners-Lee
